

ABSTRACT OF THE DISCLOSURE

Three panel pyramid-type food graters are disclosed which include a center panel hingedly connected to right and left panels and whereby the right and left panels snap together to form the partial pyramid shape. The right and left panels may be
5 snapped apart and the grater folded into a flat compact position for easy storage and merchandising. Further, both sides of each grating panel may easily be cleaned when the right and left panels are snapped apart. A cap is also provided which may provide extra stability to the structure when in use.
